

Course Title: BASIC RIGGING

Location: On-site (at customers' location)

Course Description:

This course provides instruction on the inspection, maintenance, and safe operation of rigging devices when handling materials lifted with cranes, heavy equipment, boom lifts, truck cranes, shop hoists or other hoisting equipment. It is intended as an introduction or refresher course for those who may participate, supervise or inspect rigging and hoisting operations. Participants receive a proprietary student handbook. Customers receive class rosters and course evaluations.

Course Objectives:

At the conclusion of this course, the participant will:

- Understand responsibilities and safety rules for rigging and hoisting loads.
- Understand the uses of various rigging devices.
- Be able to inspect, select, maintain, and safety use rigging equipment and hardware.
- Understand load ratings, safety factors, and stresses imposed by hoisting.
- Be able to calculate material load weights.

Prerequisites: None

Recommended Personnel: Those who supervise, inspect or participate in rigging or hoisting operations while using cranes, heavy equipment, boom lifts, truck cranes, shop hoists or other equipment.

Hours: 8

Maximum Attendees: 20

Availability: North America

Pricing: Available upon Request.
